STANDARD

REFRIGERATED COMPRESSED AIR DRYERS IN THE BT RANGE OFFER A RELIABLE, AFFORDABLE AND ABOVE ALL SIMPLE SOLUTION. THE OUTSTANDING BENEFITS OF THIS SOLUTION HAVE COMBINED TO FORM A SINGLE CONCEPT. DEVELOPMENT OF THE SYSTEM HAS FOCUSED ON OPTIMUM SAFETY, VERY LOW OPERATING COSTS, COMPACT DESIGN AND ENVIRONMENTAL COMPATIBILITY.

- 1. AIR/AIR AND REFRIGERANT/AIR HEAT EXCHANGER incl. demister integrated into an enclosure to save space
- 2. MAXIMUM HEAT TRANSFER
- 3. STAINLESS STEEL DEMISTER TO ENSURE SEPARATION.
- 4. The generous sized diameter of the flow channels in the heat exchanger leads to low flow rates and low energy needs.
- 5. A high volume plenum chamber prevents the condensate from being carried along with the flow.
- 6. Counter-flow heat exchange.
- 7. Comes as standard with electronically level-controlled condensate separator.

HIGH PRESSURE

HIGH PRESSURE COMPRESSED AIR REFRIGERATED DRYERS IN THE BTHD RANGE OFFER A RELIABLE, AFFORDABLE AND ABOVE ALL SIMPLE SOLUTION. THE OUTSTANDING BENEFITS OF THIS SOLUTION HAVE COMBINED TO FORM A SINGLE CONCEPT. DEVELOPMENT OF THE SYSTEM HAS FOCUSED ON OPTIMUM SAFETY, VERY LOW OPERATING COSTS, COMPACT DESIGN AND ENVIRONMENTAL COMPATIBILITY.

- 1. Simple, ergonomic components guarantee high efficiency and functionality.
- 2. Very low differential pressures and constant pressure dewpoints.
- 3. Stainless steel plate heat exchangers are designed and certified for an operating pressure of 50 bar.
- 4. Designed and certified in compliance with 97/23/CE-PED.

HIGH TEMPERATURE

HIGH TEMPERATURE REFRIGERATED DRYERS IN THE BTHHT SERIES ARE DESIGNED FOR VERY HIGH INLET TEMPERATURES. THE REFRIGERATED AIR DRYERS WIN OVER THE USER THROUGH THEIR MODERN DESIGN, AN INTEGRATED AFTER COOLER AND A PREFILTER IN THE COMPACT DRYER HOUSING.

- 1. The air-cooled after cooler consists of copper and aluminium bare tubes.
- 2. On the prefilter, an automatic condensate separator ensures reliable removal of the condensate.
- 3. The patented EKO DRY plate heat exchanger serves as a heat exchanger for high pressure applications.
- 4. Quality standard ISO 8573.1.

FILTER

FREE THE AIR PRESSURE EFFECT OF SOLID PARTICLES. DIFFERENT FILTER COMBINATIONS ALLOW THE USE OF THE COMPRESSOR IN DIFFERENT APPLICATION ENVIRONMENTS.

■ **1.** Directly mounted differential pressure manometer with calibrated scale for precise calculation of operating costs. ■ **2.** All threaded ports on the housing for the intake/discharge of the compressed air meet exact capacity requirements. ■ **3.** Tie rods easily absorb the force of the differential pressure. The element is essentially not under stress. The filter element can be easily detached even after a long service life. ■ **4.** Automatic condensate separator is provided as standard for removal of the separated fluids. Level C filters are equipped with a manual drain. ■ **5.** Air filter housing with an additional epoxy resin coating on pretreated aluminium-chromium substrate provides long-life protection for the housing (inside and out). Resistant to all standard compressor oils. ■ **6.** Five different separation rates guarantee effective mechanical separation including oil vapour adsorption. Multi-coloured foam socks clearly define the respective filtration levels.

COMPRESSED AIR FILTERS

P	For operating pressures up to 16 bar, separation filter, < 3 microns, Residual oil content < 5 ppm
U	For operating pressures up to 16 bar, super-fine filter, < 1 micron, Residual oil content < 1 ppm
H	For operating pressures up to 16 bar, Oil separation filter, < 0.01 micron, Residual oil content < 0.01 ppm
C	For operating pressures up to 16 bar, Activated carbon filter, < 0.01 micron, Residual oil content < 0.003 ppm

BLITZ FILTER P For bulk liquid removal plus a 3 micron coalescer (5 ppm w/w maximum remaining oil content).

BLITZ FILTER U For removal of liquid water and oil; removes solid particles to 1 micron (1.0 ppm w/w maximum remaining oil content).

BLITZ FILTER H For coalescing fine water and oil aerosols; removes solid particles to 0.01 micron (0.01 ppm w/w maximum remaining oil content).

BLITZ FILTER C For removal of oil and hydrocarbon vapors normally adsorbable by activated carbon; removes solid particles to 0,01micron (0,003 ppm w/w maximum remaining oil content (as a vapor)).

THE TWO STAGE FILTRATION

1st stage: Two stainless steel orifice tubes provide 10 micron mechanical separation.
2nd stage: In depth fiber media captures solid and liquid particles to 3 microns.

THE TWO STAGE FILTRATION

1st stage: Captures larger particles with alternate layers of fiber media and media screen. 2nd stage: Coalesces aerosols and captures solid particles with multiple layers of epoxy bonded, blended fiber media.

THE TWO STAGE FILTRATION

1st stage: Multiple layers of fiber media and media screen remove larger particles, prefiltering the air for the second stage. 2nd stage: Multiple layers of bonded, blended fiber media for fine coalescence Outer coated, open cell foam sleeve

THE TWO STAGE FILTRATION

1st stage: A stabilized bed of finely divided carbon particles removes the majority of the oil vapour. 2nd stage: Multiple layers of fiber media with bonded microfine carbon particles remove the remaining oil vapour. Outer coated, open cell foam sleeve prevents fiber migration designed for 1000 hour life at rated conditions.

OIL WATER SEPARATORS

ÖWAMAT® IS AN OIL-WATER SEPARATION SYSTEM FOR DISPERSED CONDENSATES, PROVEN FOR MANY YEARS AND CONTINUALLY FURTHER DEVELOPED. SINCE IT FULFILS THE APPLICABLE LAWFUL REGULATIONS, SAFE PROCESSING IS GUARANTEED AND DISCHARGE OF THE PROCESSED WATER INTO THE SEWAGE SYSTEM IS POSSIBLE WITHOUT ANY PROBLEMS.

■ 1. Fault alert to a control centre through an optional electrical alarm sensor on a level sensor. ■ 2. The ready to install Öwamat® is available in 6 sizes, saves space and is user friendly. ■ 3. A separate heater ensures reliable treatment during use in areas prone to frost. ■ 4. Two-fold filter inspection: Integrated level indicator and optical reference jar for sample comparison.

CONDENSATE DRAINS

COMPRESSED-AIR CONDENSATE IS UNAVOIDABLE DURING THE PRODUCTION OF COMPRESSED AIR. IT IS OFTEN HIGHLY CONTAMINATED WITH OIL AND USUALLY ALSO CONTAINS DIRT PARTICLES (SUCH AS RUST) AND OTHER HARMFUL SUBSTANCES. "OIL-FREE" CONDENSATE IS PARTICULARLY AGGRESSIVE. YOUR PRIMARY TARGET: REMOVING AND TREATING THE CONDENSATE TO ENSURE HIGH QUALITY COMPRESSED AIR.

■ **1.** The intelligent control avoids unnecessary loss of compressed air, thus permitting considerable energy savings. ■ **2.** The connection to the compressed-air system is quite simple, because the inlet and outlet of the Bekomat unit are in alignment. Discharge can be arranged either through a hose or piping. ■ **3.** The non-wearing capacitive sensor registers every type of condensate – including pure oil. Condensate discharge is no problem even with heavily contaminated condensate. ■ **4.** The electronic system consists of an integrated power unit and a control with accessible 24 VDC direct current. ■ **5.** Constant self-monitoring guarantees maximum reliability. The current operating state is indicated by an LED display. All the operator's elements and the electronic control are splash-proof and comply with IP65 protection rating.

- **1. VARIANTS**
Air quality: moisture saturated, solid particles 3 micron absolute, remaining oil contents 0,005 ppm, Compressed air class*: 3.74
Recommended use: blowing air (only for applications insensitive to oil, solid particles and water)
- **2. VARIANTS**
Air quality: pressure dew point 3°C, filtration of all solid particles, 3 micron absolute, Compressed air class*: 3.4.4
Recommended use: general workshop air
- **3. VARIANTS**
Air quality: pressure dew point 3°C, separation degree 99,999%, for solid particles 0,01 micron, remaining oil contents 0,01 ppm, Compressed air class*: 1.4.2
Recommended use: compressed air tools, pneumatics, control and instrumental technique, surface technique, powder coating, packing technique
- **4. VARIANTS**
Air quality: pressure dew point 3°C, free from aerosoles, oil smell and oil taste, solid particles 0,01 micron absolute, remaining oil contents 0,003 ppm, Compressed air class*: 1.4.1
Recommended use: foods and semi-luxury foods, chemical and pharmaceutical industry, breathing air, production air, photographic laboratories
- **5. VARIANTS**
Air quality: + 100% sterile filter Compressed air class*: 1.4.1
Recommended use: vide above + sterile air requirement
- **6. VARIANTS**
Air quality: pressure dew point -40°C, separation degree 99,999%, solid particles 0,01 micron, remaining oil contents 0,01 ppm, Compressed air class*: 1.1.22
Recommended use: outlying lines, pneumatics, compressed air tools, control and instrumental technique, surface technique, powder coating
- **7. VARIANTS**
Air quality: pressure dew point -40°C free from aerosoles, oil smell and oil damps as well as solid particles, remaining oil contents 0,003 ppm, Compressed air class*: 1.1.1
Recommended use: production air for highly hygroscopic substances in dairy, breweries, breathing air, chemical and pharmaceutical industry, outlying lines.n

* according to DIN ISO 8573-1: 1995
